- Application design, programming, networking, database and web
- Completing 1st year of 3-year program - GPA 3.68/4.0

Project Work:

- **Object Oriented Programming 2 - Airplane Gate Assigner – Ongoing**
<https://github.com/hunghanchen/GateAssigner.git>
 - Applied ArrayList, RandomAccessFile, and JavaFX into this project and presented as final project.
 - Input the airplane type (domestic, international, or cargo), airplane number, and departure and arrival time, date and place. Automatically assign the gate for the airplane, so it will not overlap the time between the two airplanes. Showed all the airplane information in the table column about the assigned gate number and all the information the user input. User can filter which gate number they want to see on the schedule and sorting the date and time.
- **Fundamentals of Software Design- Blackjack card game – Designed by July 2019**
<https://github.com/hunghanchen/Blackjack-game.git>
 - Design blackjack card game with design pattern principle, unit testing, create use case and visual paradigm.
 - Program designed allow multiple players to join this blackjack card game. Applied the MVC pattern, encapsulation to this project. Tested with JUnit framework and design manual testing.
